

**Project Outline Worksheet – Field/Laboratory/Dynamic Soil Properties – FY 2020**

**Project Title:** (For soil-survey-related projects, the project title should be descriptive and exactly as entered in NASIS (e.g., infiltration rates under different management practices).

**Project Contact Person:** (Include telephone number and email address.)

**Project Objectives:** (What are the project objectives and what is the main question to be answered? Be specific about the objectives without detailing methods or giving a justification. Those are separate topics.)

**Project Deliverables:** (What will be the project products and why is the project important to the collection, analysis, and/or application of soil data and information?)

**Background Information, Materials, and Justification:** (Is there project or site history of importance? What information is currently available related to the area or question? Is this project related to a previous or existing project? Why is the project needed?)

**Describe the soil series, ecological site, or other entity (landscape unit for example) to be evaluated.**

**Project location, and if applicable, MLRA project number:** (Be specific to the MLRA region, MLRA soil survey office, States, and counties).

**Key soil properties and/or relationships to be evaluated.**

**Proposed methodology:** (Describe the methods needed to conduct the project. What expertise, equipment, and supplies are needed from NSSC?)

**Name any cooperators (non-NRCS) involved in the project:**

**Estimate the time involvement required from the NSSC:**
