NRCS Policy on Prescribed Burning on Grazing Lands

NRCS supports and encourages the use of prescribed burning on rangeland, pastureland, forest land, hayland, Conservation Reserve Program (CRP) land, and wildlife land to meet specific resource management objectives. The national standard for prescribed burning is in the National Handbook of Conservation Practices.

Training, certification, and authority
NRCS encourages its employees to participate in prescribed burning training activities and workshops. Training is required to address both the principles of planning and safely executing the prescribed burn, as well as the effect that the fire will have on the plant and animal species and communities within the burn area.

Only trained and qualified personnel are authorized to provide assistance in planning or implementing prescribed burns. The extent to which an NRCS employee may provide technical assistance will be restricted by the job approval authority and/or certification level that has been attained. NRCS job approval authority criteria are required to be established in states where prescribed burning is practiced. Authority criteria are progressive in nature allowing employees to participate in more complex burns only when they are qualified to do so. Example A–1 of this appendix is job approval authority criteria.

In states where certification or licensing is required for prescribed burning authority, NRCS personnel must be certified or licensed, or both, by the designated agency to participate in prescribed burning activities.

Planning prescribed burns
Burns planned with NRCS assistance must adhere to all Federal, State, and local laws regarding outdoor burning, fire control, smoke management, and air quality. In states where designated agencies have responsibility for burning activities, NRCS will work with them and through them to fully utilize their expertise, personnel, and equipment. Where no agency has this responsibility, prescribed burns will be planned cooperatively and cleared through such groups as rural fire departments, county commissioners, law enforcement offices, adjacent landowners, U.S. Forest Service, Bureau of Land Management, and state forestry, wildlife, and natural resource agencies, as applicable.

The landowner is responsible for obtaining all permits and clearances as required by law. Adherence to the Clean Air Act (42 U.S.C. 7401 - 7671q) is required for all prescribed burns.

The national and state practice standards for prescribed burning are used to guide the overall development of the detailed plan. A detailed plan for the prescribed burn must be prepared. Example A–2 of this appendix is a prescribed burn detailed plan. Required items to be addressed include, but are not limited to:

- Location of the burn
- Resource management objectives of the burn
- Pre-burn vegetative description of the area
- Prescription for weather conditions required
- Description of the burning method to be used
- Description of pre-burn preparation
- Firing sequence of area to be burned
- Job assignments and descriptions of responsibilities for all persons assisting with the burn
- Equipment and materials checklist
- Job assignments and descriptions of responsibilities for all persons assisting with the fire patrol, containment, mop-up, and suppression of the burn
- Post-burn evaluation and management

Technical application assistance
Only NRCS personnel with the required training and certification are authorized to assist with the planning and application of prescribed burns. Extent of assistance is restricted by the individual’s job approval authority, certification level, or both.

For purposes of training landowners and managers and other NRCS employees, properly trained and certified NRCS personnel may participate in the following activities:

- Development of the prescribed burning plan
- Serve as fire boss
- Determine field and weather conditions for compliance with the prescription
- Serve as team leader for the implementation and completion of burn
- Direct field operations and make decisions, adjustments, and corrections necessary to ensure that the fire meets the planned objectives and that all participants are safe
- Assist with ignition of the fire
Safety must always be the first consideration in prescribed burning. The landowner or cooperator must be informed in writing that he or she may be liable for damages if the fire escapes or smoke damage occurs. If unfavorable or unstable atmospheric, fuel, or logistical situations exist, the NRCS employee must advise the fire boss or landowner to postpone the burn. If an emergency situation develops, NRCS employees are to follow the direction of the designated fire boss and act responsibly to resolve the situation.

**NRCS employee liability**
Employees acting in accordance with all Federal, State, and local laws and within the scope of their work accept no greater or less liability than that associated with the performance of any other assigned duty. Any questions concerning liability should be referred to the appropriate state conservationist.

**State office responsibility**
The NRCS state office will be responsible for providing adequate training and equipment for employees involved in prescribed burning activities. States will develop job approval authority criteria and ensure that employees act within their training and certification levels. States will ensure that only qualified NRCS employees are used for reviews and spot checks of prescribed burning activities. Job approval criteria are reviewed and concurred in by the appropriate range-land management specialist, forage agronomist, or other designated grazing lands specialist.
Prescribed Burning
Job Classifications

Class Ia - Maintenance Burn
- Size of area: Less than 100 acres
- Vegetation: non-volatile herbaceous and woody species
- Terrain: 5% slope or less

Class Ib - Maintenance Burn
- Size of area: Less than 320 acres
- Vegetation: non-volatile herbaceous and woody fuel
- Terrain: 5% slope or less

Class Ic - Maintenance Burn
- Size of area: Less than 640 acres
- Vegetation: non-volatile herbaceous
- Terrain: 5% slope or less

Class II - Maintenance Burn
- Size of area: Less than 100 acres
- Vegetation: Same as Class Ia plus volatile herbaceous species and live volatile woody species less than 4 feet tall.
- Terrain: 8% slope or less

Class III - Maintenance Burn
- Size of area: Less than 640 acres
- Vegetation: Same as Class II plus live volatile woody species greater than 4 feet tall and dead volatile woody species.
- Terrain: 12% slope or less

Class IV - Maintenance Burn
- Size of area: no restrictions
- Vegetation: no restrictions
- Terrain: no restrictions

Class V - Reclamation Burn
- Size of area: no restrictions
- Vegetation: no restrictions
- Terrain: no restrictions

* Size of Area Contiguous acres to be burned on a single management unit during the same growing season are considered to be one prescribed burn regardless of the number of individual segments the fire is divided into. Total acres for any prescribed burn can’t exceed the Size of Area limits for the appropriate job classification.
To have job approval authority, an employee must have completed a formal NRCS prescribed burning training course including participation in a field training burn and supervised participation in at least three prescribed burns at which NRCS provided technical assistance. The individual must demonstrate good judgment, knowledge, and skills in prescribed burning.

The following are the requirements for the job approval authority:

Class I  Individual must have properly planned at least three Class I burns which have been approved and must have demonstrated good judgment, knowledge, and skills for Class I burns.

Class II Individual must have Class I approval authority, must have properly planned at least three Class II burns which have been approved and must have demonstrated good judgment, knowledge, and skills for Class II burns.

Class III Individual must have Class II approval authority, must have properly planned at least three Class III burns which have been approved and must have demonstrated good judgment, knowledge, and skills for Class III burns.

Class IV Individual must have Class II approval authority, must have properly planned at least three Class IV burns which have been approved and must have demonstrated good judgment, knowledge, and skills for Class IV burns.

Any NRCS employee who violates NRCS Prescribed Burning Policy will have their job approval authority revoked immediately.

Job approval authority may be granted to employees who have documented evidence of previous training or experience that equals or exceeds NRCS prescribed burning training requirements. NRCS occasionally hires an employee with extensive training, experience, and education in prescribed burning while in college, at another agency, etc.

Prescribed burn management plans are valid only for the area planned and for the burning season planned. If the landowner decides to change the location of the burn or is unable to burn during the prescribed time frame, a new plan must be prepared prior to conducting the burn.

2. Ignition plan and/or firing sequence (see plan map).

* Parties igniting a prescribed burn may be liable for damages resulting from the fire and control cost, should fire escape the designated area.
D. Preparation of area for burning:
   1. Firebreak construction:
      a. Firebreak widths will be equal to or greater than two times the height of adjacent vegetation.
      b. Plowed, disked and burned firebreaks, being essentially devoid of fuel, provide least danger of
         fire escape.
      c. Close mowed and cool-season grass firebreaks have fuel available that can provide an avenue
         for fire escape. Smoke, from green growth, reduces visibility, inhibiting burn monitoring.
      d. High mowed fire intensity reduction lines (" - 12" stubble), will be installed if fine fuel exceeds
         1.5 ton/acre. Line with will be at least 10 feet @ 1.5-3 T/A and 20 feet @ >3 T/A.
   e. Kind of fireline Width feet Length feet Date to apply
